DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 82-86, 91-92, 97-104, and 109-132 have been considered but are moot in view of the new ground(s) of rejection.

Response to Amendment

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 82-132 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter that was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. (New Matter).

According to Applicants, the instant claims were amended to include all of the limitations of claims suggested to be allowed if written in independent form. However, claims 87-90, 93-96, and 105-108, which were previously objected as being allowable except for the dependence upon a rejected base claim, did not recite wherein the nucleic acid segments recited in the independent claims further comprised an additional sequence encoding a second fusion protein sequence that comprised an additional sequence encoding a peroxisome targeting protein subunit, and a nucleic acid segment encoding an enzyme selected from acyl-ACP thioesterase, fatty acyl hydroxylase, yeast multifunctional protein (MFP), and hydroxyacyl-CoA epimerase.

Art Unit: 1635

Moreover, the invention recited in instant claims 87-90, 93-96, and 105-108 currently recite an invention that was not previously set forth in the application as filed. For example, the claims currently recite, nucleic acid segments comprising nucleic acid sequences encoding two fusion proteins, and further comprising a nucleic acid segment encoding a acyl-ACP thioesterase, fatty acyl hydroxylase, yeast multifunctional protein (MFP), or hydroxyacyl-CoA epimerase gene.

See 37 CFR § 1.53, which states that no new matter may be introduced into an application after its filing date. Applicants must remove the new matter added in response to this Office Action.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
